How a class recording becomes study notes

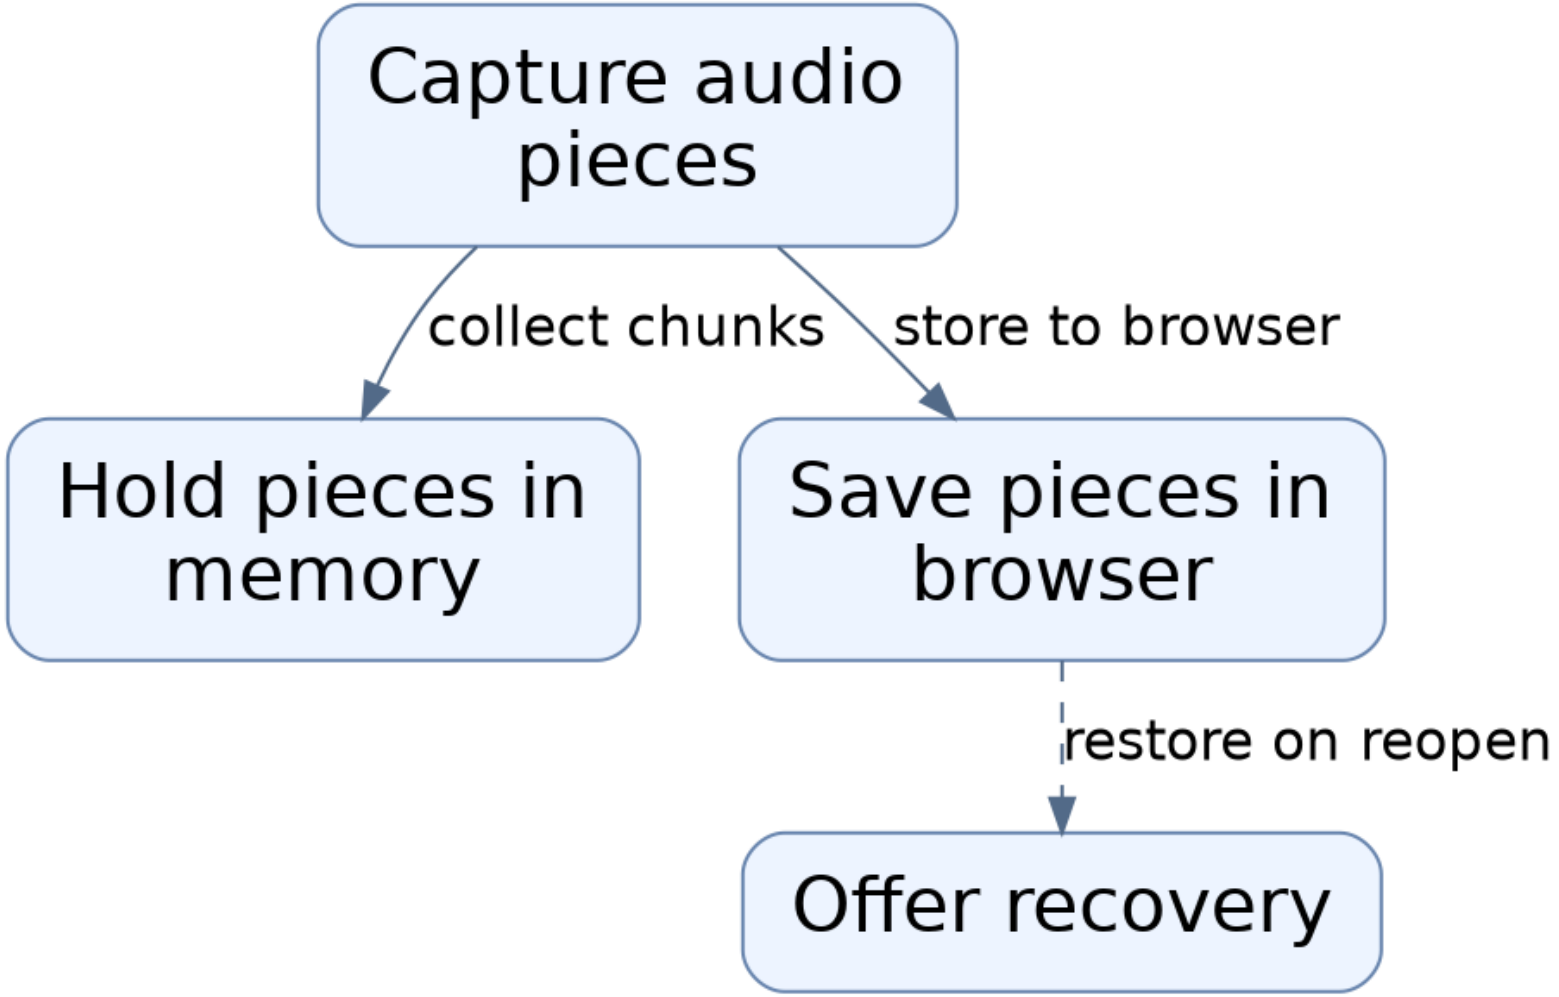

You record audio in the browser; it is uploaded for processing; afterwards the page shows a transcript and AI-generated notes, refreshed automatically until ready.

Read from top to bottom. Arrows show the direction of the interaction.

Recording hundreds of small pieces safely

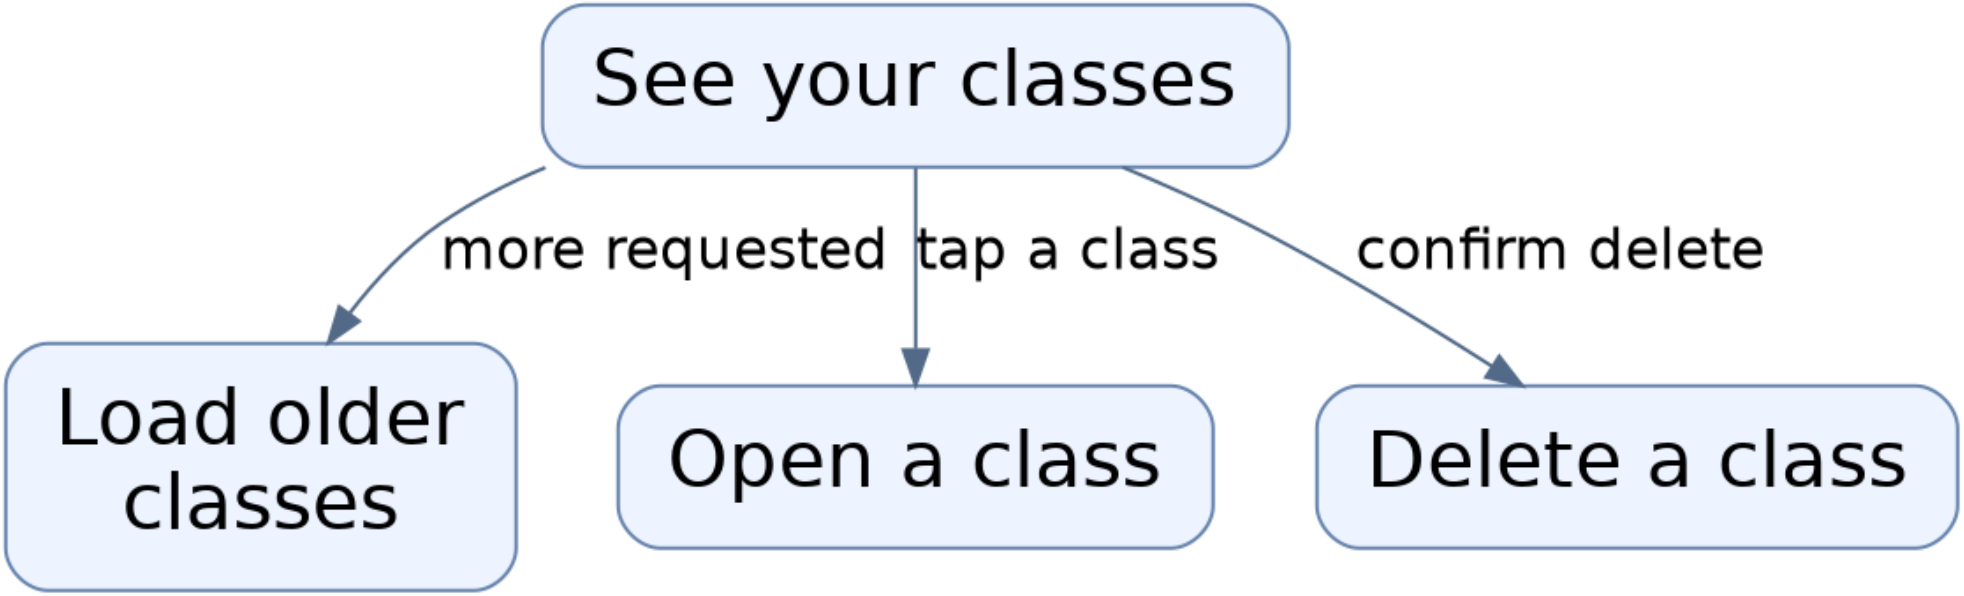

Audio is captured in one-second pieces. Pieces are kept in memory and also saved in the browser, so a crash or closed tab does not lose an unfinished recording.

Dashed arrows: connections that need confirmation.

Managing your saved classes

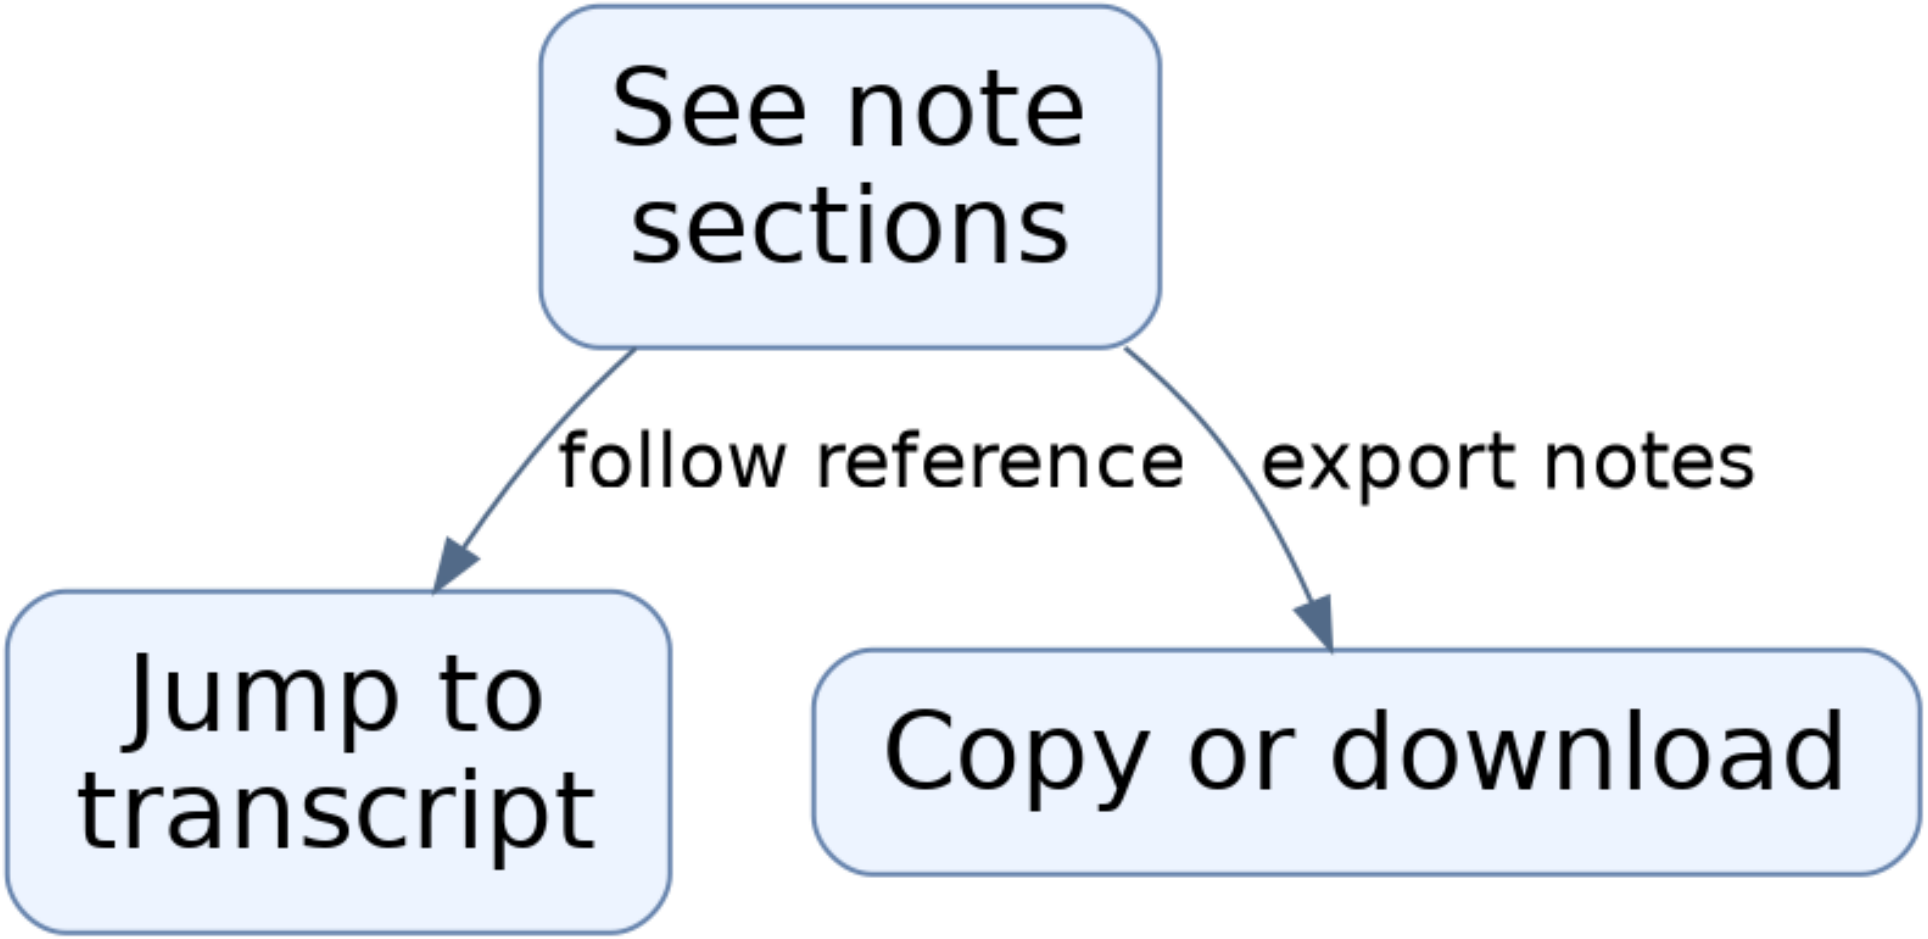

The home page lists your classes with dates, lengths, and status. You can open one, delete it, or load older classes.

Read from top to bottom. Arrows show the direction of the interaction.

Reading and taking notes with you

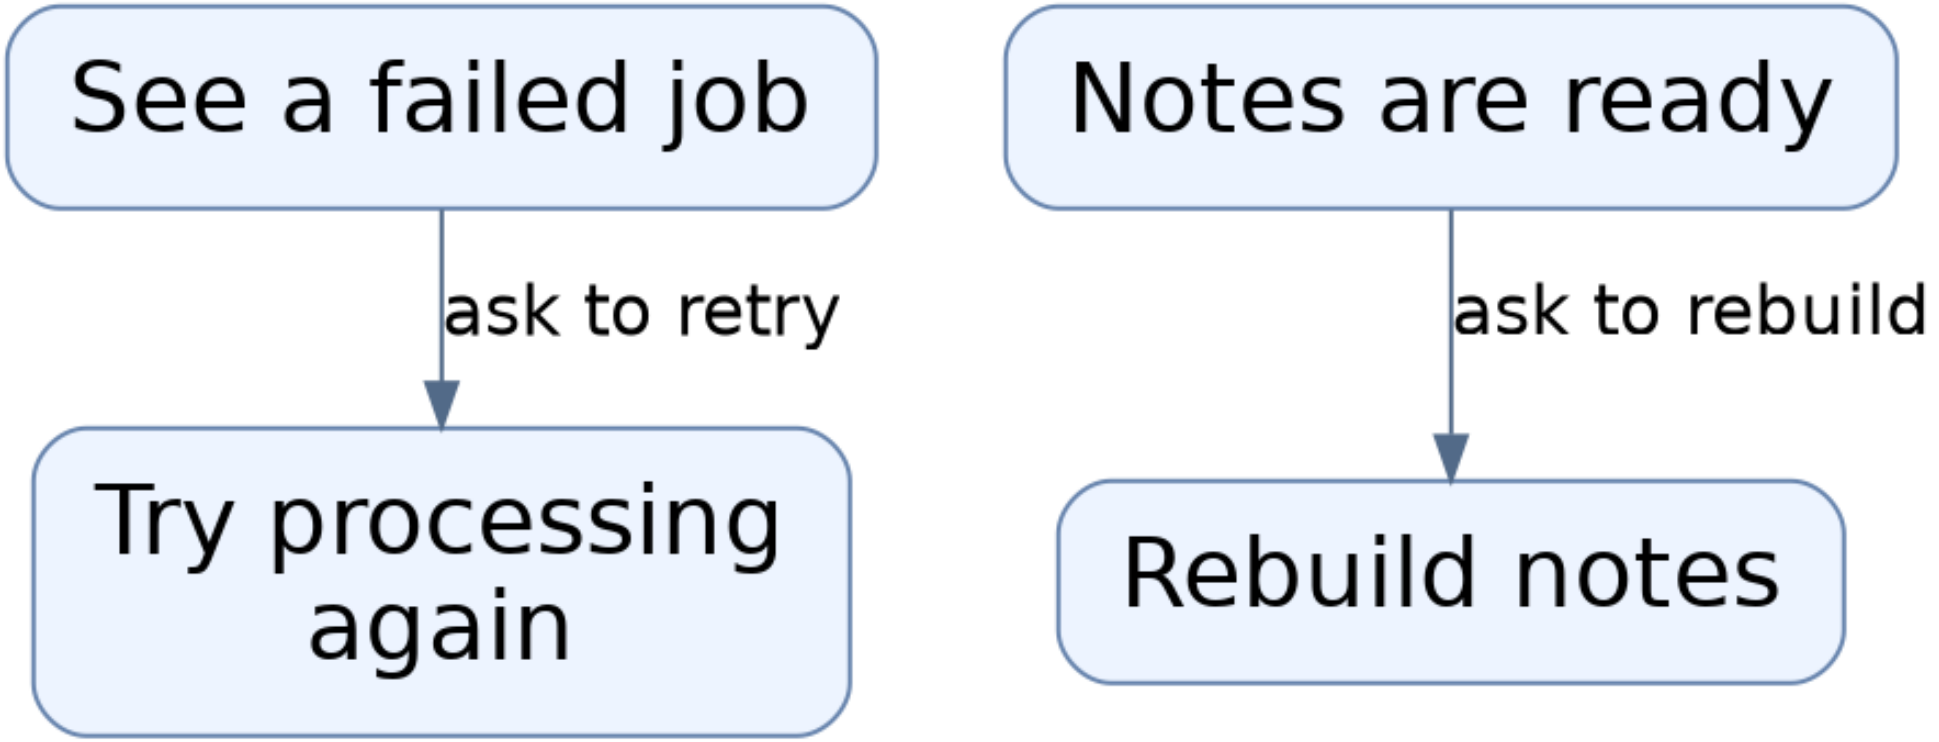

The note view shows overview, topics, decisions, and action items, with links back to transcript moments. You can copy transcript text, download it, or export notes as a document.

Read from top to bottom. Arrows show the direction of the interaction.

Reworking or retrying a class

When processing fails you can ask for it to be tried again; when notes exist you can ask for them to be rebuilt from the saved transcript while the old draft stays visible.
